

Seminário de sistemas dinâmicos e estocásticos

Departamento de Matemática - IMECC - UNICAMP

On Hopf bifurcation in random dynamical systems

Jeroen Lamb
Imperial College

Resumo:

We discuss some recent progress on the understanding of the dynamics of a random dynamical system with parameters that in the zero-noise limit exhibits an oscillatory instability (Hopf bifurcation). This is joint work with Maximilian Engel, Doan Thai Son and Martin Rasmussen (all at Imperial College London).

Data: Quinta-feira, 15 de dezembro de 2016, 14hs.

Local: Sala 321 do IMECC.
